

Per valutare l'efficacia delle azioni, sono stati monitorati i livelli degli alunni nel corso dell'anno scolastico in italiano, matematica, inglese e francese, mediante delle prove oggettive per classi parallele predisposte dai dipartimenti. Gli esiti delle prove sono stati sistematicamente raccolti e analizzati.

Qui si riporta l'analisi relativa al “confronto tra sezioni” degli esiti delle prove effettuate nell'a.s. 2018/19 in italiano e matematica: questo confronto è utile per valutare l'omogeneità delle classi e validare i criteri di formazione delle classi. Osservando gli esiti dei test, si notano sia in italiano che in matematica, e nelle diverse prove, sezioni con risultati significativamente positivi e altre con risultati significativamente negativi.

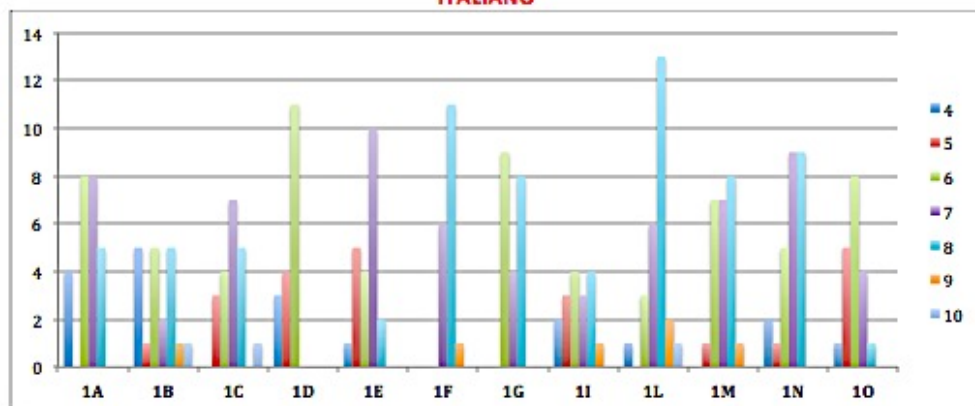

Osservando gli esiti relativi alle singole classi si nota che le differenze tra le sezioni sono più accentuate nelle classi terze (in ingresso nell'a.s. 2016/17) che nelle prime (in ingresso nell'a.s. 2018/19) dimostrando una flessione della variabilità nel corso del triennio.

Si riportano infine gli esiti dei test di ingresso di italiano e matematica delle stesse classi nel corso di un triennio: il confronto nel triennio permette di seguire l'intero percorso scolastico nella scuola secondaria di I grado delle classi in entrata nell'a.s. 2016/17 e che si licenzieranno nell'a.s. 2018/19. Si può notare che gli esiti in entrata e quelli in uscita sono sovrapponibili per entrambe le materie e nel confronto tra sezioni si nota che permangono lungo il triennio i dislivelli tra le classi.
